ALKHIDMAT HEALTH SERVICES

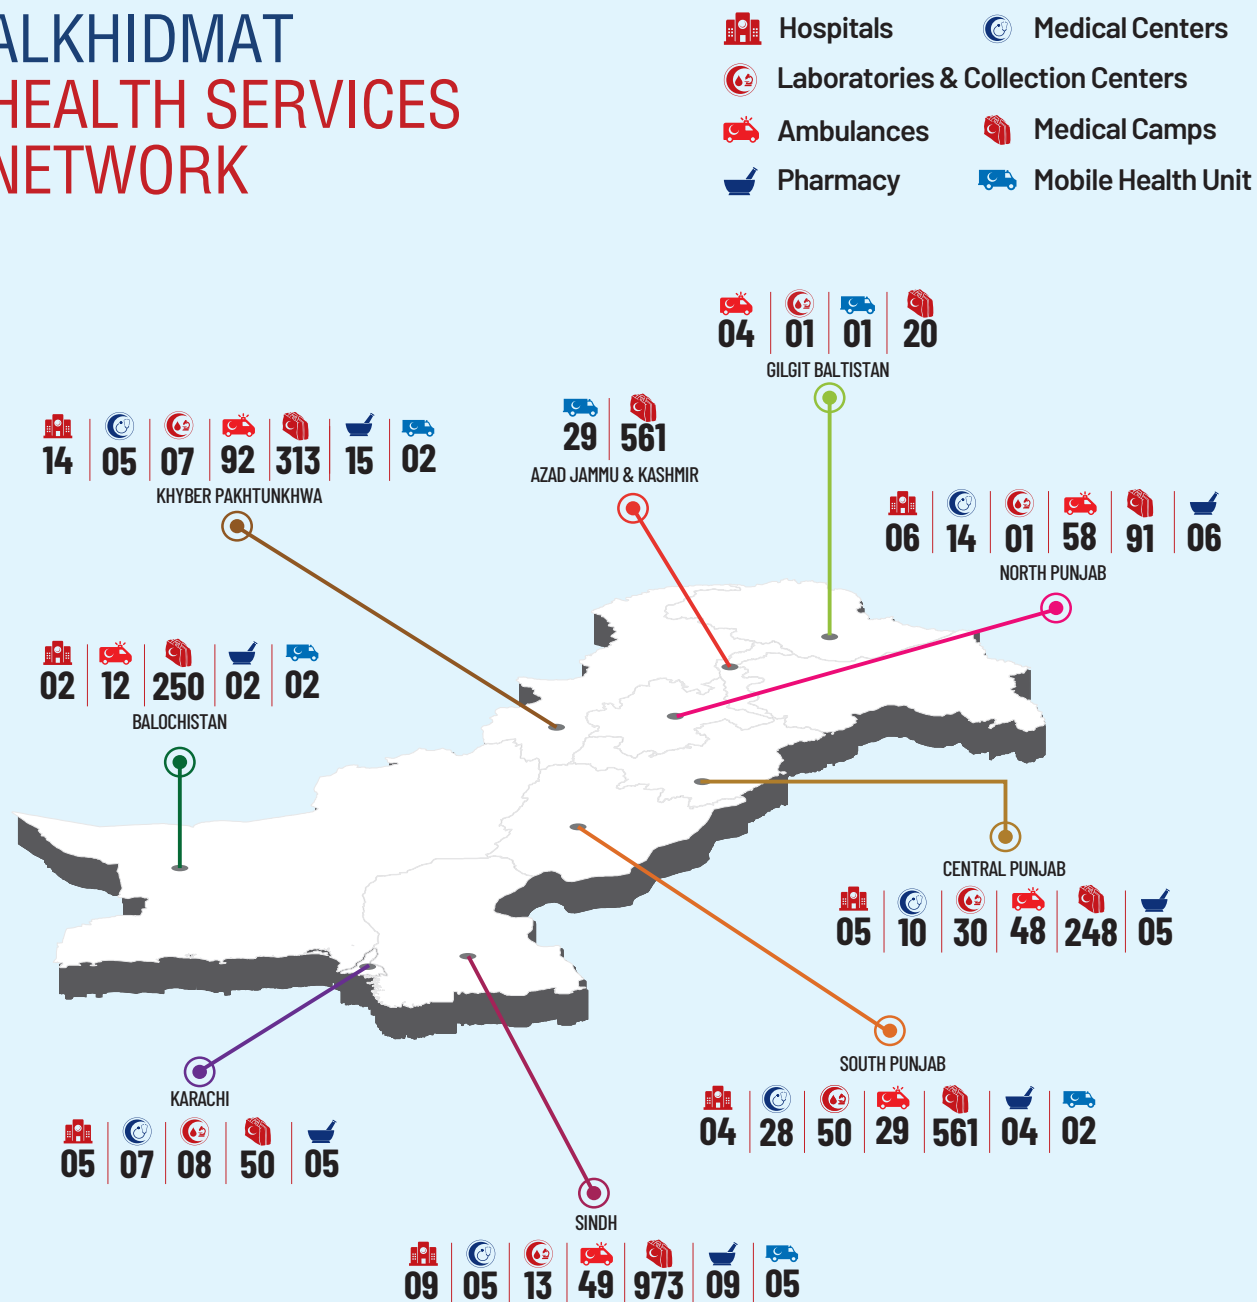

Pakistan has poor health indicators, including primary health services being inaccessible to nearly 50% of the population.

Besides carrying out routine health care services across the country, as a frontline relief organisation, Alkhidmat also responded to the health crisis in flood affected areas of Pakistan. It ensured a coordinated delivery of essential health care services, efficient medical assistance to vulnerable groups and stronger outbreak detection and control.

Alkhidmat Health Foundation prioritized provision of lifesaving medicines and supplies; integrated outreach healthcare, including mobile health units and mobile health clinics; disease surveillance and outbreak support; assurance of maternal and child health care; and support to public sector health facilities.

AKF has inducted female staff in field hospitals and "Safe Mother Safe Family" clinics to ensure better access to women especially expectant mothers.

ALKHIDMAT HEALTH SERVICES NETWORK

ALKHIDMAT MRI FACILITY PROSPECT

Karachi, a metropolitan city with a staggering population of around 30.5 million, finds itself grappling with a severe shortage of accessible and affordable Magnetic Resonance Imaging (MRI) services. A scarce public sector MRI facility exists in the city but with potentially longer waiting times. MRI facilities in the private sector are burdened by exorbitant costs, often ranging from PKR 35,000 (120 USD) to PKR 60,000 (200 USD) or more per scan.

Given that potentially thousands, if not tens of thousands, of Karachi's residents require MRI services each year, there is an urgent need for comprehensive measures to bridge this healthcare gap. This dire situation calls for immediate attention to set up affordable MRI facilities to address the deteriorating diagnostic facilities in the public sector, escalating costs in the commercial sector.

Magnetom 1.5T MRI Scanners

Project Cost: (USD 1.6 Million)

This pathological laboratory and Radiological Diagnostic Centre will serve 30 Million people of Karachi in particular and whole Pakistan in general by serving as Central Control Room and referral center as well.

Salient Features

Neurology: Capability to perform perfusion studies using Neuro perfusion Package, SWI, Diffusion Tensor Imaging and Spectroscopy.

Orthopedic and Abdomen: Optimized workflow for Orthopedic and Abdominal Exams using DOT Engines.

Cardiac: Imaging using advanced Cardiac Package

Breast: High Resolution Breast imaging for Women Health Using high End breast coil

Prostate: Dedicated application suites for Prostate Imaging and Whole-body Imaging.

The unique features of this center will be state-of-the-art equipments, run by a team of experienced and specialised professionals providing these facilities at very subsidised rates.
